## PTV Boundaries // Postal and administrative boundaries worldwide

Without area boundaries, the visualization of business or market data lacks spatial orientation. Would you like to fully exploit the potential of an intuitive map display and meaningfully supplement your tabular analyses? PTV Boundaries is available for these applications.

### PTV Postcode & Admin Boundaries

- Both postal and administrative boundaries are available for numerous countries around the world
- Worldwide coverage with homogeneous data structure
- Individual data licensing for end customers and developers
- Annual update

### PTV Postcode Boundaries

- In addition to the postcode, PTV Postcode Boundaries also contains the names of administrative area units as attribute
- PTV Postcode Boundaries is ideal for analyzing customer data available at address level
- In addition to digital boundaries, central point coordinates are also available

### PTV Admin Boundaries

- Digital boundaries are available per country at several area levels
- For individual markets, PTV Postcode Boundaries is also available in a particularly high resolution
- PTV Admin Boundaries can be linked to a variety of data, for example, official data or from other statistical sources
