

PTV Fuel Price Data // Location and route-specific fuel prices – Europe-wide

This service offers measurable added value for optimized refueling in the transportation industry and many other fields of application. PTV Fuel Price Data answers questions like: Is it better to drive a few more kilometers before the next refueling stop? In which country does refueling cost the least? At what time of day is it better to refuel?

Advantages

- Cost reductions from efficient planning of refueling stops
- Targeted search for required fuel type
- Easy integration into existing systems
- The data set includes branded and independent petrol stations

PTV Fuel Price Data

- Access to a central database
- Latest fuel prices
- Price information along a route or starting from a location
- Request for further information such as services available at petrol stations
- Available in many European countries

Use Cases

- Transport management systems (TMS)
- Scheduling systems
- Billing audits
- Route planning
- Trip planning

Outlook

- Global availability
- Electric charging points
