

PTV Street Directory and Location Files // Exact coordinates of reference data

The location file is a list of locations with corresponding X and Y coordinates. For more finely detailed applications, PTV also offers street directories in different levels of detail: from postcode street sections to house number areas, right up to individual addresses.

PTV Location Files

- Location File Germany with around 116,000 locations
- Location File Europe with around 556,000 locations
- Locations and districts are usually depicted as the center of the built-up area
- In addition to the location identification, it also contains the postcode, the name of the town or district and the town size class
- statistical number and central point coordinates

PTV Street Directory & Location Files

- Both street directories as well as location files are available for numerous countries around the world
- Easy integration into existing systems
- Standardization of address details
- Annual update

PTV Street Directory

- PTV offers street directories in three different levels of detail: Street Directory PLUS, House Number Street Directory and Postcode Street Directory
- The Street Directory PLUS is a breakdown of house coordinates with the corresponding address points and postal addresses
- The House Number Street Directory contains a breakdown of house number areas on a street section level
- The Postcode Street Directory provides a breakdown of streets based on the postal system
